

The aim of the webinar is to offer an introduction to the recent developments of covalent, activity-based probes and reactive warheads, as well as their use in the search for new ligands for potentially hard-to-drug or “undruggable” targets. The webinar will provide a topical overview of this fast-developing field and its potential impact in modern drug development strategies.

## Covalent Modalities: Covalent probes

Programme

**4:30-5:15**

**Reimagining Druggability using Chemoproteomic Platforms**

**Daniel NOMURA**

University of California, Berkeley, USA

**5:15-6:00**

**Covalent Chemical Probes - From Binding to Function**

**Nir LONDON**

Weizmann Institute of Science, Rehovot, IL
